

Inspired by simplicity

WiND-X Kiteboarding Gear 2007

Company Profile

WiND-X is a company dedicated to kiteboarding and anything that is wind-powered. Its principal motives are to promote this great sport in the region especially in Malaysia.

WiND-X is started by 2 brothers; Edmund and Nicholas Cheong. Both are crazy about kites and have tried anything from single lines to quad lines. Coming from a kite-community in Malaysia, they discovered that there are people who are interested in this sport but the cost of this hobby was a MAJOR factor.

Looking at this, the 2 brothers decided that they should do something. It did not start immediately but after through many designs and crashes; finally, did the brothers succeeded with their first prototype.

"You should have seen how messy our work-shop was with all the early prototypes and failed kite-materials." - Nicholas Cheong.

"Nick and I had a lot misunderstandings on how to move forward but one thing the both of us agree was, our motto - *Inspired by simplicity*" said Edmund, the older of the two.

Day by day, kite surfing equipments have become more technical. WiND-X direction in this business is to simplify complicated matters. By saying this, we do not condemn the advancement of technology in kiteboarding equipments BUT we are saying that great flying and control characteristic of the kites can be achieve through simpler methods. You just need to sit and do some extra thinking. "Inspired by simplicity..." that is what WiND-X is all about.

The company has been in an incubation period of over one year. One year of great testing & thrashing. Many materials and designs were tested.

And now, WiND-X believe that is should come out from its shell with their first 2 models for 2007; the **Cyclonez** Bow and the **Typhoonz** C.

WiND-X is committed to bring the highest quality kite with the best, precise stitching method.

Cyclonez Bow Kite

Introducing **Cyclonez**, the WIND-X Bow Kite Design. The whole design is inspired by simplicity. Fitted with the reliable bow-kite bridles but a possibility of upgrading the bridles from time to time. **Windnovation** continuously experiment on new settings which must be proven and the results being repeated before any changes takes place.

The **Cyclonez**, is one of the safest kites as the de-power range is great and would fit a huge range of riders from beginners to advance. A kite for almost every rider. It has:

- Reduced bar pressure
- Moderate Aspect Ratio Design
- Total De-power
- Cross Active Bridle System
- All-round tough stitching
- Comes in 9m, 12m, 16m

TOTAL DEPOWER

Available Colors

Typhoonz

WIND-X Typhoonz

How can we forget the classic C-kite that we were introduced to when we rode for the first time? WiND-X brings you the Typhoonz. It's a moderate to high aspect ratio kite design which caters the power-riders. It comes with 7 struts to maintain a rigid structure for super stability.

This kite is designed to have a 5th line for more de-power.

- The all-time improved classic
- Moderate to high aspect ratio
- 5th line attachment point
- Great power, excellent hang time
- All-round tough stitching
- Comes in 8m, 10m, 12m, 14m, 17m, 21m

Available Colors

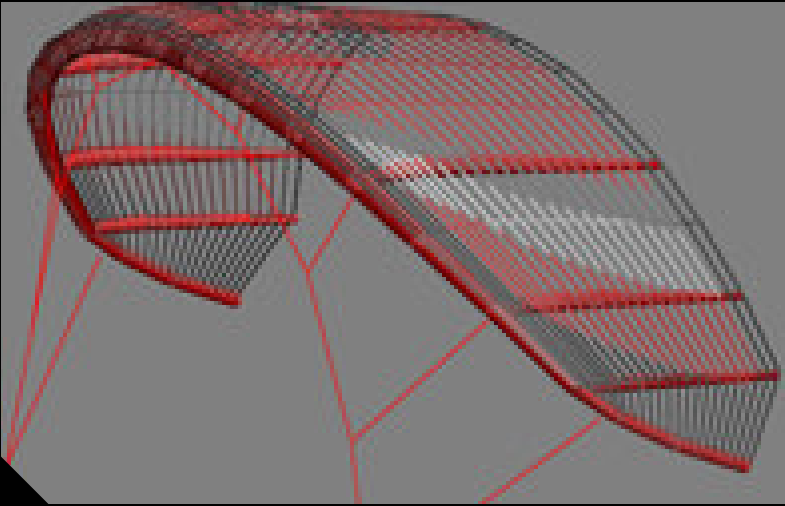

5th Line Availability

This kite is made for those who enjoy raw power. The kite is design for the 5th line. Though WiND-X feels that is good enough with the current 4-line system.

Great Hang Time

If you are going for hang times, this high AR kite will definitely bring out its true capabilities. Its smooth ride will definitely make your day.

Windnovation

Wind-novation is the research and development arm of WiND-X. The R&D team consists of crazy, creative people who think out of the box. To them, they feel everything can FLY. The team is dedicated to research any materials they can get their hands on. They even think of the best way to cut the kite fabric. Somehow, they seem to be correct. Cutting the fabric in the correct angles actually saves costs! We waste less fabric and that is what WiND-X is all about.

From the 4 line C-kite to the 5th. From bridled bows to no bridles; Windnovation's objective is to produce the best kites tuned for the best performance.

The Windnovation team have achieved many things besides Kiteboarding gears. Somehow they have the extra time to break records. They are currently the Malaysian Book of Record Holder for Malaysia's biggest kite which measures 52 feet wide and 120 feet long. Their latest creation is the elephant which is 25 feet wide and 30 feet long.

So if you have any enquiries, just email them at wind-novation@wind-x.com. Tell them your ideas; they'll make it come true.

Materials

Made to last; the kite has Dacron 160g/sqm for its leading edge and struts. High quality Dacron is used to maintain its shape and rigidity.

Polyester ripstop 52g/sqm is incredibly tough, lightweight and it does not stretch.

Mark Cloth Reinforcements makes sure that the kite would withstand the punishing it will get.

Our bars are made of composite carbon which makes it one of the toughest and lightest in the market. And together with EVA hand-grip, it gives riders comfortable handling although the material is tough and made to last.

Excellent workmanship
